'Revolutionary' new approaches, 'game changing' methodologies and 'transformational' uptakes are accelerating the rate at which organisations are changing.

These changes are increasing the number of technology platforms in use and the expectation to deliver with increasing speed, agility and efficiency – without compromising on quality.

Make sure your next IT project is independently analysed, planned, quality assured and governed effectively to achieve the desired, and right, outcome with Qual IT's consultants.

Minimise costs, maximise potential

Functional, quality IT delivery is essential for every successful business. But selecting and implementing the right system is a complex process, and the consequences of poor management can be significant. Rework, overspending, lost revenue, and customer dissatisfaction can all flow from a failed or delayed IT project.

Our independent Qual IT consultants work with your business from the beginning, helping to minimise the risks, navigate uncertainty, and maximise the potential of your project by bringing a wider industry and best practice view into your organisation.

We can:

- Define the problem and develop a QA strategy
- Review solutions and offer unbiased recommendations
- Reduce overall costs for the project by applying independent advice at every stage
- Offer expertise and thought leadership
- Specialist QA, assessment, and analysis of project outcomes

On the right path, from the start

Qual IT's consulting services are designed to take you from strategy development and project scoping, to delivery, QA, and ongoing support. Our team has the tools, processes and experience needed to guide you through the delivery journey.

Certainty
from the
start

Defining the scope

Our consultants get involved at the earliest stages – offering independent support in writing a business case, scoping out a project, and managing the various stakeholders. Our tailored approach ensures project delivery aligns with your specific business needs.

Strategies for success

Our pragmatic approach is designed to set appropriate and realistic deliverables, research a range of solutions, and lay out a strategic plan for implementation.

We focus on keeping your business running as usual, and on finding ways to deliver effective results without compromising your service.

Implementation

Our consulting team has worked with a wide range of clients, so we can ensure that our experience can provide the right approach for your project's success. This helps reduce time to market, minimises quality gating challenges, and includes all stakeholders as needed. As always, we're focused on balancing quality assurance and end-user satisfaction through implementing complex enterprise QA strategies, quality process reviews, and helping clients measure return on investment.

Support, analyse, and review

Ongoing support, analysis, and review are essential factors to ensure the success of your IT investment. Our consultants provide an independent view for the success of your project and its continuous improvement. Our expertise can help with process review for the benefit of ongoing quality improvements.

What to expect from our consultants

Our consultants help clients achieve the best possible return on their IT investment by working with your team to ensure that all project outcomes are aligned to your strategy and business needs.

But no matter how closely we work with you, we are also there to provide an objective, independent view, and help your organisation find the best pathway for success. In our experience, businesses can struggle to look outwards and find lateral solutions, particularly if they start a project with a solution in mind.

We can help you avoid these pitfalls by bringing "good" practices from the wider industry into your organisation, giving your project the best possible chance of success.

Our consulting services include:

- Independent advisory
- Quality assurance analysis and benchmarking
- Specialist QA management
- Programme level quality assurance
- Business assurance and strategy
- Release and environments management
- Quality process review
- Stakeholder and vendor management
- Independent quality assurance (IQA)
- Programme and project review

Why choose Qual IT?

Qual IT's consulting services are outcome-focused and driven by experience.

We know IT projects can cost both money and time, so we focus on efficient, practical strategies throughout. We can be there from the beginning, from initial IT strategy and scoping, through to delivery, maintenance, and ongoing support.

Our consulting team is qualified, capable, and experienced. We have worked with some of New Zealand's leading companies on a wide range of successful IT projects and programmes, large and small. We work as trusted, pragmatic advisors, providing expertise at every stage to help guide your project to success.

When it comes to your investment, certainty's good. Get your next project on the right path from the start with Qual IT consulting.
